

Enable Email Authentication on Your Mail Client MICROSOFT OUTLOOK 2002 – POP3

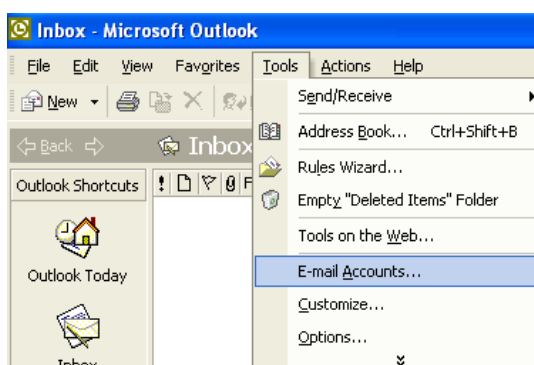

What Is Email Authentication?

Email authentication is a wide set of other tools used by email senders and receivers to establish sender reputation. All major ISP's like Hotmail, Gmail, AOL, use email authentication to filter out suspected spam emails.

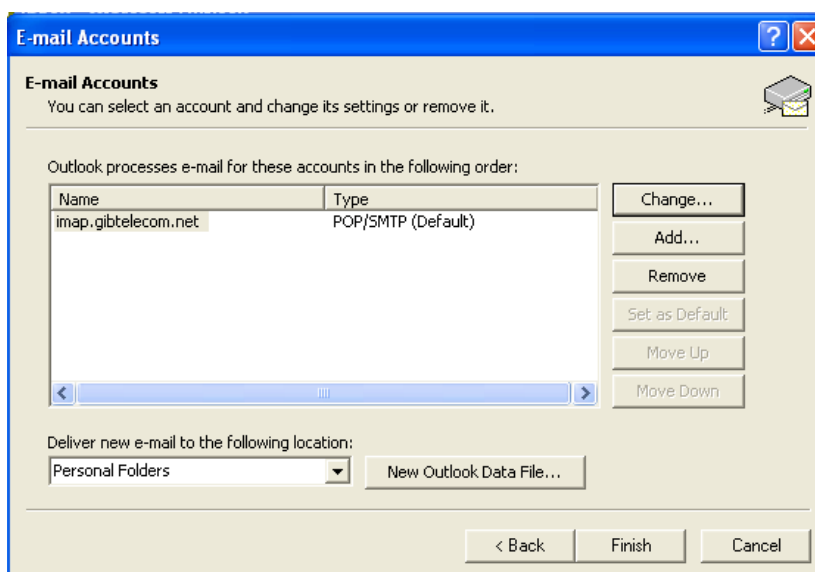

Gibtelecom has implemented email authentication on the sending of emails as done currently on the mailbox content retrieval, which will help validate emails sent by our customers are originating from a legitimate source

POP3 Account Changes

1. Open your mail client Microsoft Outlook and select, **Tools**, then **Email Accounts Settings**.

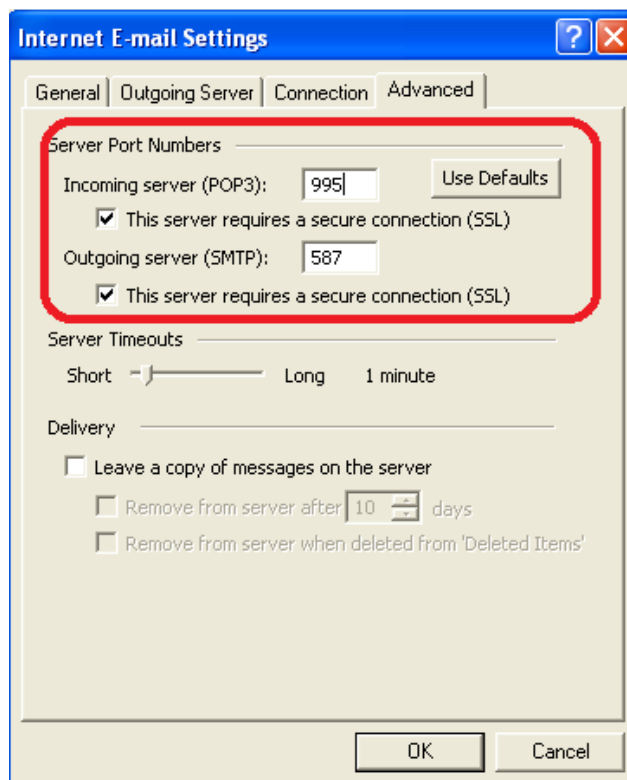

2. Once the Email Accounts Settings Dialog Box opens, select your account and click on **Change**

- Once the Change Account Dialog Box opens, select **More Settings**

- Select the **Outgoing Server Tab** and enable **My Outgoing Server Requires Authentication**

5. Select **Advanced Tab**. from *Use The Following Type Of Encrypted Connections*.

Checklist:

- If you are using a **POP3** Account with **TLS**, make sure that Incoming Server (POP3) Port Number is **995** and the Outgoing Port is **587**.
- If you are using an **IMAP** Account with **TLS**, make sure that Incoming Server (IMAP) Port Number is **143** and the Outgoing Port is **587**.
- If you are using an **IMAP Account with SSL** as the only option, make sure that Incoming Server (IMAP) Port Number is **993** and the Outgoing Port is **587**.

6. Click on **OK, NEXT** and then **FINISH**.

Enabling Email Authentication for outgoing emails has now been completed.

7. Now that the outgoing email connection is secure, some Anti-Virus Software may flag an error, if this occurs please Disable the scan outgoing emails option. *[Please refer to your Anti-Virus Vendor for more information]*
