

Enable Email Authentication on Your Mail Client OUTLOOK EXPRESS – 6 IMAP

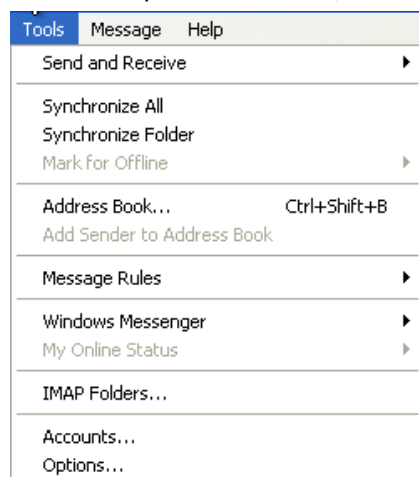

What Is Email Authentication?

One such method is email authentication, along with a wide set of other tools used by email senders and receivers to establish sender reputation. All major ISP's like Hotmail, Gmail, AOL, use email authentication to filter out suspected spam emails.

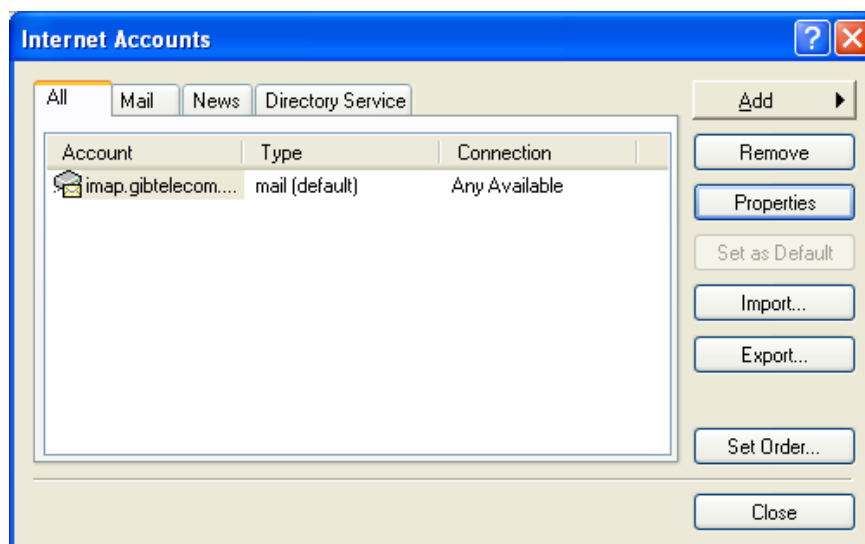

Gibtelecom has implemented email authentication on the sending of emails as done currently on the mailbox content retrieval, which will help validate emails sent by our customers are originating from a legitimate source

IMAP Account Changes

1. Open your mail client Outlook Express and select, **Tools and Email Accounts**

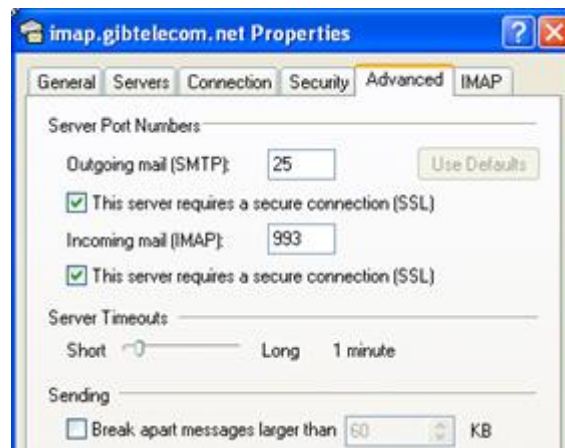

2. Once the Account Settings Dialog Box opens, select your account and click on **Properties**

3. Select the **Servers Tab** and enable **My Server Requires Authentication**

4. Select the **Advanced Tab** and enable both options **This Server Requires A Secure Connection** under Incoming and Outgoing Mail

- If you are using a POP Account, make sure when enabling the secure connection (SSL) that the Incoming Server (POP3) Port Number is 995 and the Outgoing Port is 25.
 - If you are using an IMAP Account make sure when enabling the secure connection (SSL), that the Incoming Server (IMAP) Port Number is 993 and the Outgoing Port is 25.
5. Click on **Apply**, **OK** and then **CLOSE** any dialog box that may be open.

Enabling Email Authentication for outgoing emails has now been completed
