

## Enable Email Authentication On Your Mail Client

### THUNDERBIRD Version 17

#### What Is Email Authentication?

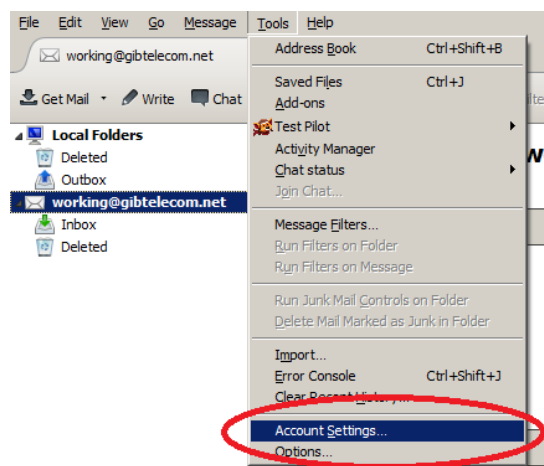

*One such method is email authentication, along with a wide set of other tools used by email senders and receivers to establish sender reputation. All major ISP's like Hotmail, Gmail , AOL, use email authentication to filter out suspected spam emails.*

*Gibtelecom has implemented email authentication on the sending of emails as done currently on the mailbox content retrieval, which will help validate emails sent by our customers are originating from a legitimate source*

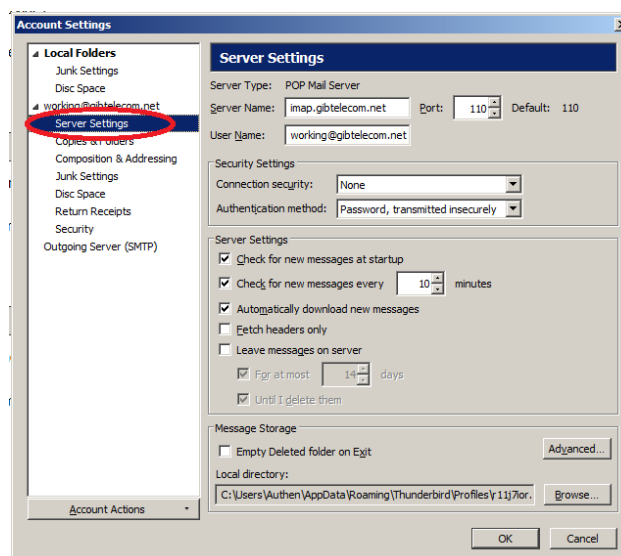

## How To Enable Email Authentication On Your Mail Client

### POP3 Account Changes

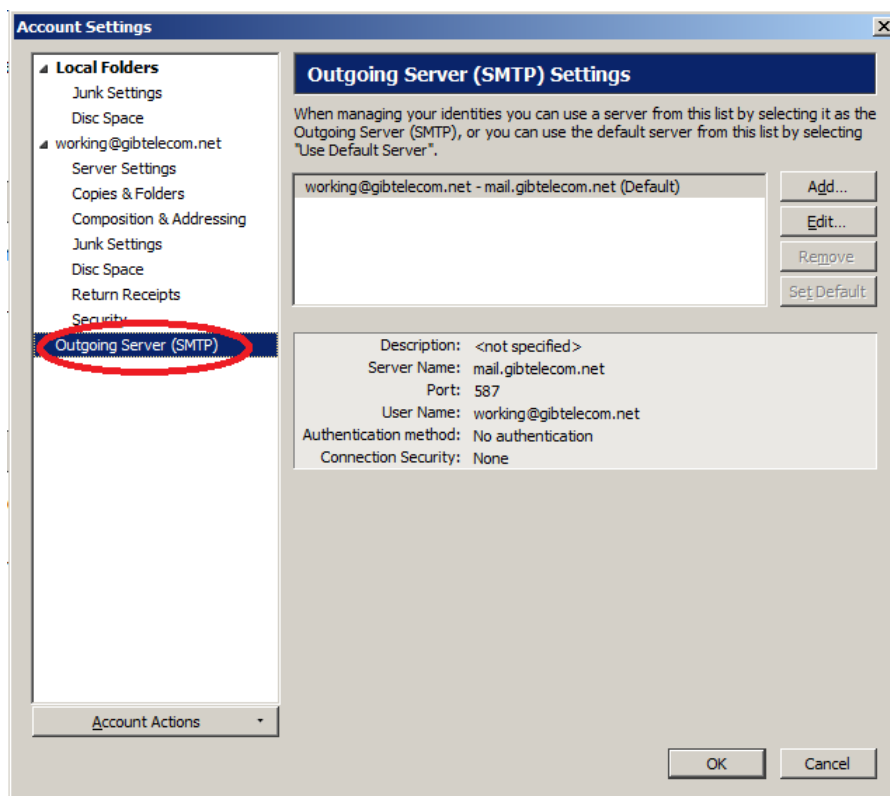

1. Open your mail client Thunderbird and select, **Tools and Account Settings**

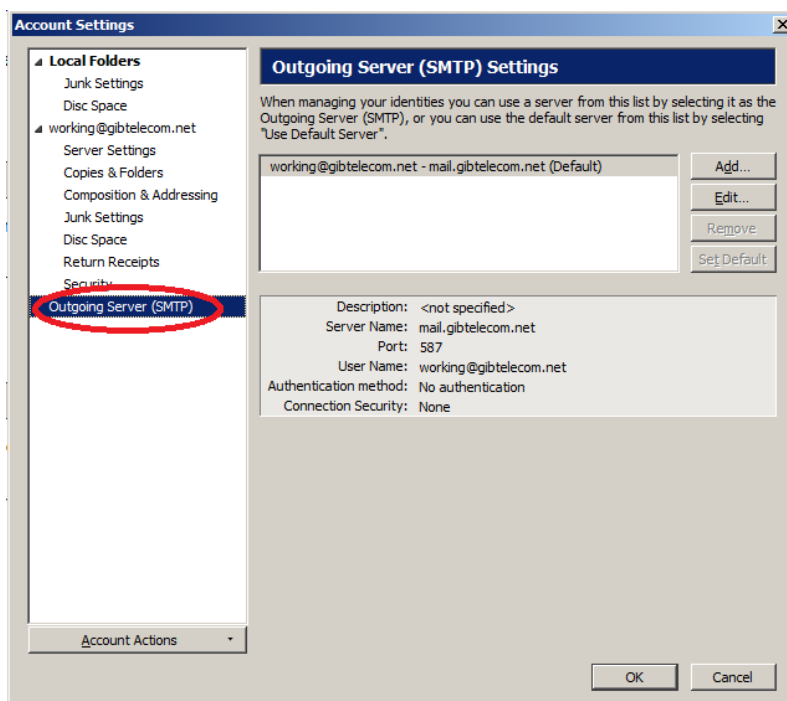

2. Once the Account Settings Dialog Box opens, select **Server Settings**

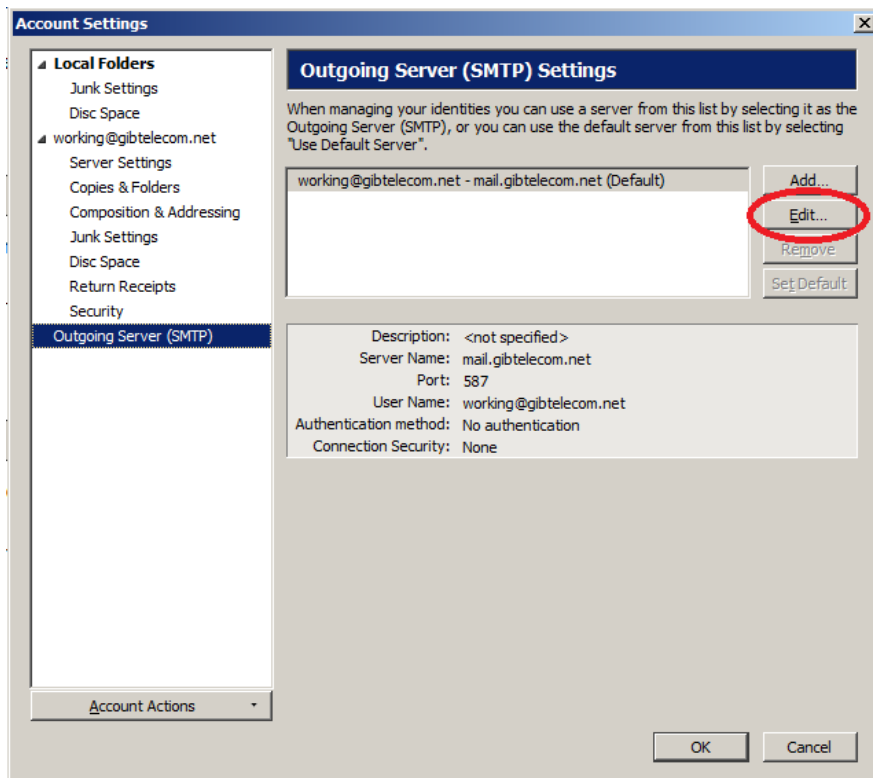

- In Server Settings, Under **Security Settings**, enable **Connection Security**, the option **SSL / TLS**

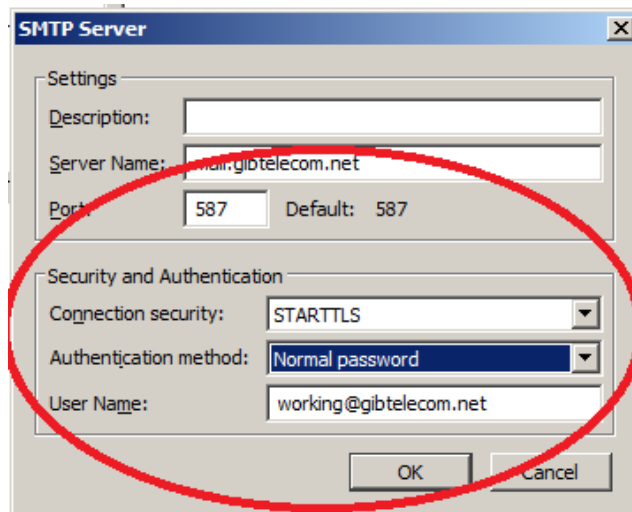

- Select **Outgoing Server (SMTP)** and click on **EDIT**

- Under the option **Security and Authentication**, **Connection Security** select **STARTTLS**

**Enabling Email Authentication for outgoing emails has now been completed**
