

Enable Email Authentication On Your Mail Client INCREDIMAIL

What Is Email Authentication?

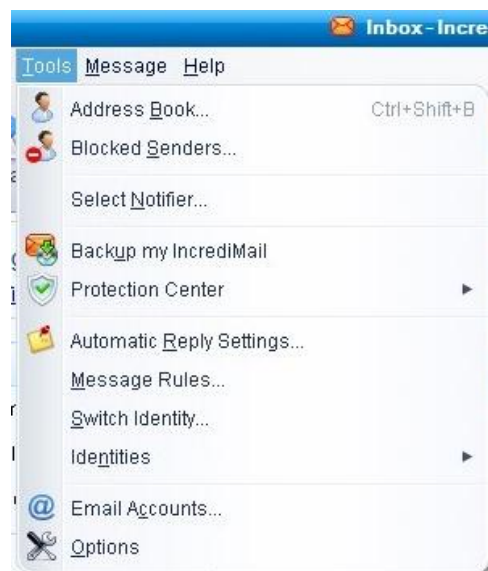

One such method is email authentication, along with a wide set of other tools used by email senders and receivers to establish sender reputation. All major ISP's like Hotmail, Gmail , AOL, use email authentication to filter out suspected spam emails.

Gibtelecom has implemented email authentication on the sending of emails as done currently on the mailbox content retrieval, which will help validate emails sent by our customers are originating from a legitimate source

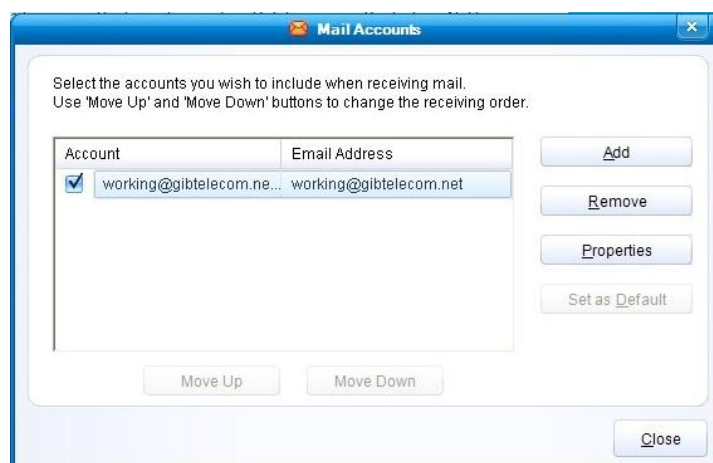

How To Enable Email Authentication On Your Mail Client

Please note in this example Gibtelecom is using an IMAP Account, but the same steps should be applied for a POP3 account.

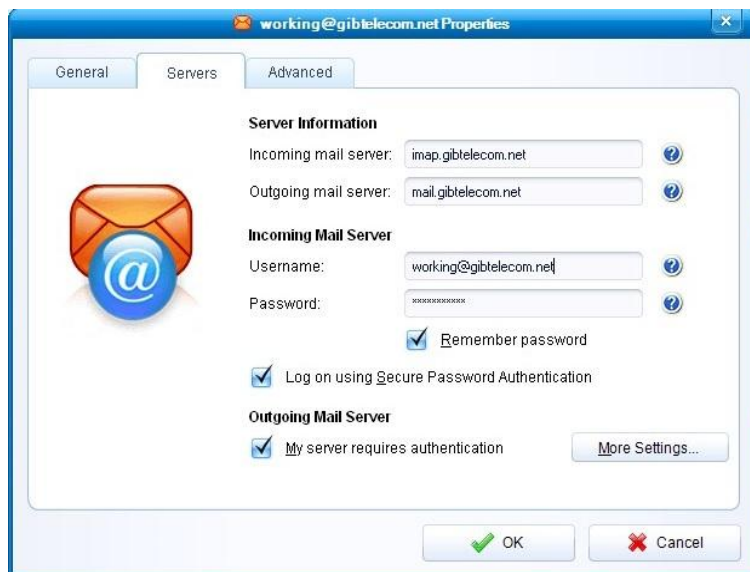

1. Open your mail client Incredimail and select, **Tools and Email Accounts**

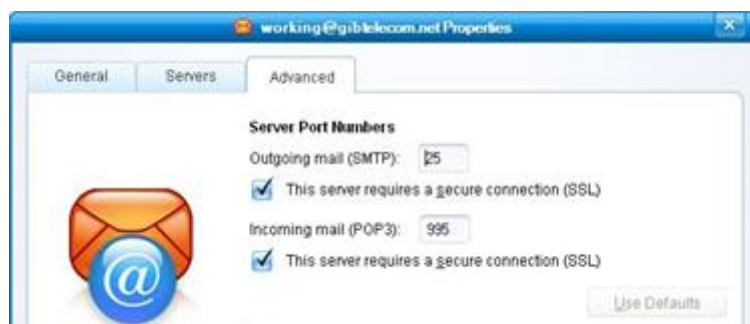

2. Once the Properties Dialog Box opens, select your account and click on **Properties**

3. Select the **Servers Tab** and enable **My Server Requires Authentication**

4. Select the **Advanced Tab** and enable both options **This Server Requires A Secure Connection** under Incoming and Outgoing Mail

- *If you are using a POP Account, make sure when enabling the secure connection (SSL) that the Incoming Server (POP3) Port Number is 995 and the Outgoing Port is 587.*
- *If you are using an IMAP Account make sure when enabling the secure connection (SSL), that the Incoming Server (IMAP) Port Number is 143 or 993 and the Outgoing Port is 587.*

5. Click on **Apply, OK** and then **CLOSE** any dialog box that may be open.

Enabling Email Authentication for outgoing emails has now been completed
